Abstract of JP2003106481

PROBLEM TO BE SOLVED: To provide a penetrant laying structure of an operation cable capable of preventing abrasion of a liner and improving dustproof and waterproof performances by mitigating the steep curve of a penetration part penetrating through a hole of a steel plate. **SOLUTION:** This penetration laying structure of the operation cable laid by penetrating through the hole 2 covered with a grommet 3 comprises a retainer device 4 comprising an elastic body having a cylinder part 41 externally fitted around the penetration part 1A of the hole 2 for the operation cable 1 and a flange part 42 provided around the outer circumference of the cylinder part 41, and an internal circumferential groove 35 formed in the grommet 3 for fitting the flange part 42 therein.
